FSOFT AIX • AI TRANSFORMATION

PM AI Bootcamp

AI PM Transformation Program - English Edition

Turning project managers into AI-native PMs who can direct AI to build, operate, and govern real delivery systems.

Human-led • AI-first • Outcome-first

Translation scope: folder A-khoi-dong

This is not "PMs who know ChatGPT"

X

Not the target

- Asking a chatbot for quick answers
- Prompt engineering without delivery ownership
- Adding AI on top of unchanged legacy workflows
- Rubber-stamping AI output without real review

Y

What we do train

- Running projects in an AI-first operating model
- Directing AI to build and operate a real system slice
- Applying delegation, governance, and telemetry
- Making outcome and ROI decisions with evidence

200-300 PMs move to CASAN Level 2 (Augmented)

200-300

Project Managers

Level 2

Augmented core, with selected PMs reaching Level 3-4

Capability

Operate AI build + governance + telemetry + ROI, without rubber-stamping.

Deliverable

A working Customer Zero slice with a Dev Book and real telemetry.

Recognition

AI-Native PM certification, distinction path, and follow-on AI budget.

Participants bring: one real project (or one of six briefs), a Claude Code account, a safe workspace, and nine weeks of practical commitment. Prior coding experience is not required.

Human-led · AI-first · Outcome-first

1

Human-led

People decide, judge risk, and own the outcome.

2

AI-first

AI drafts and executes first; humans review and steer the next step.

3

Outcome-first

Delivery, quality, speed, margin, and learning matter more than tool activity.

Operating model: the deployable unit is the pair (PM + AI). The PM acts as the conductor; AI acts as the production force.

CASAN maturity + AI delegation

Claude Code as the Super Orchestrator

Participants do not use AI as a simple chat box. They use Claude Code to carry a whole step: read context, plan, delegate, execute, gate, and log.

One goal, not ten micro-actions

Claude Code reads files, runs commands, calls tools, and records the loop so the PM can focus on judgment.

More autonomy requires tighter gates

The orchestrator is not there to remove accountability. It is there to free time for review, decisions, and risk control.

Three phases over roughly nine weeks

Hard graduation gates: 1) pass the six capability pillars, 2) show a working system live, and 3) pass viva. Missing one gate means no graduation.

Eight modules and ten assignments

M1 AI Foundation

M2 AI Toolchain

M3 AI Project
Workflow

M4 Prompting

M5 AI Delegation

M6 AI Governance

M7 AI Telemetry

M8 AI Economics

Weekly rhythm: W1 requirements, W2 WBS-estimation-risk, W3 delegation-governance, W4 telemetry-ROI. Each week includes a clinic and a showcase.

Assignments: ten real-project tasks such as requirements, WBS, estimation, risks, reports, meeting summaries, retrospectives, and a delivery dashboard. Every submission includes prompts, evidence, and telemetry.

Build your Customer Zero

No pilot, no graduation. The pilot is not a pile of AI-generated documents; it is a working vertical slice that the PM directs and then personally uses.

1

Build to understand

Real understanding appears when the PM sees gates fail, spec conflicts surface, and AI mistakes must be corrected.

2

Mandatory evidence

Working system, Dev Book, real telemetry, and an operating log from self-use as Customer Zero.

3

Live defense

Each PM answers viva questions such as: where did AI fail, what gate caught it, and why did you choose L3 instead of L4?

The program intentionally rewards visible human judgment, not polished AI output.

Telemetry, certification, and the four-wave roadmap

What we measure

- Real human hours, not token proxies
- Compression and token efficiency
- Adoption, rework, estimation accuracy, quality
- Outcome and ROI at project level

Certification path

Certified -> Proficient -> Distinction -> Champion, with one-time bonus and monthly Claude Code budget.

Wave 1

200-300 PMs

Wave 2

80 pilots

Wave 3

20 champions

The full A package includes this deck, the A4 infographic, and the English program overview markdown/PDF for quick sharing.
