

BA AI Bootcamp — Workbook (BA track) v2.0

Companion to: Program and the common workbook

Role focus: Business Analyst

Common core: mindset, delegation, governance, telemetry, capstone, and viva are shared with every other track. This file swaps in BA-specific exercises and outputs.

Terminology: For unified terminology, see [docs/GLOSSARY.md](#).

o. Shared case study

Use the same LMS case or replace it with one of the project briefs ([PB-01](#) to [PB-06](#)).

The BA goal is not to produce elegant prose. The BA goal is to clarify intent, structure business flow, and make acceptance testable.

Common rules for every BA exercise

- Use an AI coding agent as an orchestrator, not a paragraph generator.
- Keep telemetry and PM-edit evidence in every submission.
- Use hard-stop when requirement ambiguity is real.
- Score human reasoning, not polished AI output.

BA-EX-01 — Elicitation and requirement review

Goal: draft and challenge the requirement set.

Outputs:

- [REQ-<CASE>.md](#)
- clarification question list
- at least one hard-stop
- telemetry

Pass bar: the learner distinguishes true stakeholder questions from AI misunderstanding and improves scope clarity.

BA-EX-02 — User story and acceptance criteria

Goal: convert the requirement into testable stories.

Outputs:

- user stories
- acceptance criteria in Gherkin style
- role / use-case matrix
- telemetry

Pass bar: stories are INVEST enough to work with, AC is measurable, and at least one AI-generated weak AC item is corrected by the learner.

BA-EX-03 — Process mapping (As-is -> To-be)

Goal: make workflow change visible.

Outputs:

- `PROCESS-<CASE>.md`
- simple swimlane or BPMN-style process summary
- highlighted pain points
- telemetry

Pass bar: the learner shows what changes in the process, not only what the new UI does.

BA-EX-04 — Backlog grooming and prioritization

Goal: turn raw scope into a reasoned backlog.

Outputs:

- prioritized backlog
- value / effort or MoSCoW reasoning
- dependencies
- telemetry

Pass bar: the learner can defend why some items stay out of MVP.

BA-EX-05 — Clickable prototype or business-flow prototype

Goal: create a mini Customer Zero from the BA angle.

Outputs:

- clickable or screen-based prototype
- user-flow explanation
- role journey
- telemetry and Dev Book note

Pass bar: the learner can walk a stakeholder through the flow and explain at least one AI-generated prototype defect they corrected.

BA-EX-06 — Delegation Map from a BA point of view

Goal: show where AI helps business analysis and where humans must stay in charge.

Outputs:

- delegation map
- L0-L5 assignment
- A / A+ marks
- rationale for at least one conservative decision

Pass bar: sensitive requirement interpretation and acceptance-signoff work are not over-delegated.

BA capability map

Exercise	Capability emphasis
BA-EX-01	Clarification and anti-assumption discipline
BA-EX-02	Testable requirement quality
BA-EX-03	Process thinking
BA-EX-04	Scope control
BA-EX-05	User-facing validation
BA-EX-06	Safe AI delegation

Facilitator notes

- BA learners should be pushed hard on ambiguity handling.
- Acceptance criteria that only describe the happy path are incomplete.

- Prototypes count only when the learner understands the business flow behind them.
- BA work still needs telemetry and a visible PM-edit trail.

Changelog

Version	Date	Update
v1.0	2026-07-02	First BA track workbook
v2.0	2026-08-25	Header: shorten Program ref, tool-agnostic orchestrator note, add glossary pointer; move changelog to end
